

Resume

Personal Information

Full Name: Gilberto Moraes | **Professional Role:** Senior Full-Stack Engineer (React / TypeScript / Node.js / Next.js) | **Seniority Level:** Senior | **Country & City:** Brazil

Skills and Tools

Main Technologies / Skills: TypeScript, React.js, Next.js, React Native, Node.js, Jest, Design Systems, Micro-frontends

More Technologies: GraphQL, Apollo Client, Context API, Cypress, React Testing Library, Styled-components / CSS-in-JS, Vue.js, NestJS, TypeORM, PostgreSQL, MariaDB, MySQL, SQLite, Redis, AWS Lambda / AWS SQS / AWS SES, CI/CD (GitHub Actions, GitLab CI), Docker / Docker Compose, Storybook, REST APIs, commercetools, Stripe, Algolia, Contentful CMS, Azure (Blob Storage), Firebase (Auth, Analytics, FCM), Performance Optimization, Accessibility (WCAG), Internationalization (i18n), MCP (Model Context Protocol), Playwright, TailwindCSS

Years of experience on main technologies: JavaScript — 10+ years, TypeScript — 6+ years, React.js — 6+ years, React Native — 4+ years, Node.js — 5+ years, PHP — 8+ years, Jest / Design Systems / Micro-frontends — 5+ years

Professional Experience

Buildaz

Job Title: Senior Full-Stack Engineer (Freelance) | **Start – End Date:** December 2023 – Present

Contractor via Buildaz delivering production frontends for international clients (Germany / EU).

- Sarstedt AG — International B2B e-commerce platform (Next.js + commercetools) serving 8 countries: 519 commits, 207 PRs merged (99% merge rate) across 17 months (Nov 2024 – Apr 2026)
- Krüger / Project Pelé — front-end for an ontology-aware knowledge-graph bidding platform (Wittgenstein), migrating the prototype into a production React app (Jun 2026 – Present)
- Kivvon — React Native news app (iOS/Android): native build setup (Xcode/certs), on-device testing, sprint delivery (Dec 2023 – Apr 2024)

Project Technologies: React, Next.js, TypeScript, React Native, commercetools, FastAPI, PostgreSQL, Bun

Indeed

Job Title: Senior Frontend Engineer | **Start – End Date:** October 2021 – April 2026

Project Name: Indeed – Internal Tools & Analytics (via In All Media / Coderfull)

Allocated to Indeed via In All Media (staffing agency)

Key Activities / Responsibilities:

- Delivered 3 major Smart Sourcing epics on Curios/Employer Analytics (2024–2026, 49 MRs): Decline Reasons (end-to-end with 6 components), Outreach Analytics (9 new columns with proctor-gated customization), and Tags column (API integration, overflow detection, tooltips — refined through 4 rounds of code review)
- Drove frontend development of Betty/XML Testing Tool (2022–2024, ~100 MRs): built the complete interface from scratch — file upload, multi-tab reporting (Summary, CDATA, Formatting), activity tables, CSV export
- Implemented Indeed Apply integration, LDAP-based permission gating, and maintenance mode on Betty
- Migrated multiple applications to OneHost module federation architecture with error boundaries
- Built Budget Estimator end-to-end (multi-step form, location autocomplete, Cypress E2E suite) for Hiring Events (2021–2022, 24 MRs)
- Created reusable Common Table component (sorting, pagination, column toggle) in cs-universe-common, adopted across Betty and Benchmark Tool
- Drove TypeScript type-safety initiative, eliminating any types across 15 files and removing 60+ lines of duplication
- Maintained 72%+ test coverage using TDD with composeStories pattern; increased test coverage from 50% to 99% on critical modules
- Conducted accessibility audit (WCAG 2.1 AA) — keyboard navigation for links and tab focus
- Built Atlas — personal CLI toolkit (4,000+ lines) automating development workflow: Jira ticket intake, git worktree provisioning, AI-powered code review (Claude), progressive knowledge extraction. Reduced per-ticket setup from ~15 min to under 1 min
- Authored 1,696-line team standards document (RULES.md) covering testing, i18n, git workflow, and code review patterns
- Documented 81 IFL design system components as searchable team reference
- Collaboration with US-based engineering, product and UX teams (Austin, TX)

Project Technologies: React.js, TypeScript, GraphQL (Apollo), Jest, RTL, Storybook, Cypress, CSS-in-JS, OneHost (Module Federation), IFL Design System

Softo

Job Title: Full-stack Developer (PHP, React, React Native) | **Start – End Date:** May 2020 – January 2022

Project Name: Hearian Guardian (Android App, 100M+ downloads)

Project Description: Sole full-stack engineer (96% of backend commits, 79% of mobile) for a hearing health app with 100M+ downloads on Google Play. Responsible for the complete payment stack, authentication system, email marketing, push notifications, and mobile features.

Key Activities / Responsibilities:

- Built complete payment stack from scratch: PagSeguro (Brazilian gateway), PayPal (international), and Google Play Store IAP with subscription lifecycle management, coupon codes, country-based pricing, and refund logic
- Implemented automatic subscription renewal system, replacing manual processes and boosting user retention by up to 50%

- Migrated entire authentication system to Firebase — social login (Google + Facebook), legacy user data importer, multi-provider support, and token refresh
- Created automated email marketing engine with 8 behavioral campaigns via AWS SES — user segmentation by last access, subscription expiration, and engagement patterns
- Built push notification system with Firebase Cloud Messaging — 8 notification templates, token management, and queue processing
- Developed web admin portal (React + TypeScript): customer management dashboard, payment history, plan administration
- Built hearing calibration module: audio calibration algorithms, calendar-based conditioning history, severity-indicator charts, and offline mode
- Shipped 30+ versioned production APK builds (v1.1.67 through v1.1.153)

Project Technologies: Slim Framework (PHP), React Native, React.js, Firebase, AWS SES, MariaDB, Docker

Project Name: FanHero (Live Streaming Platform)

Project Description: Frontend engineer on a live streaming platform, delivering 188 commits across 4 months. Rebuilt the navigation system and implemented real-time video features.

Key Activities / Responsibilities:

- Rebuilt entire navigation system (Navbar + Sidebar) as reusable web components using StencilJS and TailwindCSS
- Implemented live video features on Amazon Chime SDK: breakout rooms, individual attendee mute/unmute (audio/video), screen sharing with crash prevention
- Built geofenced/exclusive rooms with payment-gated access (RedactedRoom component)
- Integrated Google DFP/IMA SDK for ad monetization in Clappr video player

Project Technologies: Vue.js, TypeScript, GraphQL (Apollo/Absinthe), StencilJS, TailwindCSS, Amazon Chime SDK

Project Name: CollaMap (Research Collaboration Platform)

Project Description: Backend engineer contributing to a researcher collaboration platform with 135 commits. Built complex recursive data structures with transactional integrity.

Key Activities / Responsibilities:

- Built recursive debate system with cascading soft-delete, transactional integrity, and deep search traversal on nested tree structures
- Implemented threaded comment system with permission-based CRUD, pagination, and search filtering
- Created concept management with business rule validation (unique titles, children limits, image upload)
- Built email notification templates (Handlebars) for research status change workflows

Project Technologies: NestJS, Fastify, TypeORM, PostgreSQL, Swagger, Passport JWT

PerfectPay

Job Title: Backend Developer (PHP, Laravel, DBA) | **Start – End Date:** January 2020 – July 2020

Project Name: Perfect Academy

Project Description: Backend development of an API product for course creation and management.

Key Activities / Responsibilities:

- Built database structure for courses, lessons, and producers
- Implemented signup, password reset, and mailing workflows
- Designed subqueries to improve report performance
- Implemented access control using Laravel Policies

Project Technologies: Laravel, PHP, MySQL

Santa Casa de Misericordia de Presidente Prudente

Job Title: Full-stack Developer (Laravel, Vue.js, Vuex) | **Start – End Date:** October 2016 – December 2019

Project Name: Intranet System Migration

Project Description: Led migration from legacy intranet to Laravel-based system for a hospital.

Key Activities / Responsibilities:

- Implemented customized access control for department-based permissions
- Created digital information boards for patient management
- Developed a lunch reservation system to prevent food waste
- Built a data importer for payroll tools to improve accuracy

Project Technologies: Laravel, Vue.js, Firebird, PostgreSQL

Ataque Propaganda

Job Title: Web Developer (PHP / JS / HTML / CSS) | **Start – End Date:** August 2015 – February 2016

Key Activities / Responsibilities:

- Developed and maintained websites and blogs using PHP, jQuery, HTML, CSS, and Bootstrap

Project Technologies: PHP, jQuery, HTML, CSS, Bootstrap

Nova Era Industria de Farinha de Carne

Job Title: Administrative Manager | **Start – End Date:** December 2007 – May 2014

Key Activities / Responsibilities:

- Managed purchasing and payment processes
- Supported operations with Excel automation (VB)
- Led team management duties

Project Technologies: Excel (VB), administrative tools

Education

Universidade do Oeste Paulista (UNOESTE) Degree: Associate Degree in Internet Systems (Tecnologia em Sistemas para Internet) | Years: 2012 – 2022

Program Summary: A comprehensive 2,890-hour program focused on full-cycle web development, covering algorithms, programming for the web (I–IV), object-oriented

programming, database modeling, mobile development, software quality, computer networks, operating systems, interface design, entrepreneurship, and project-based learning.

Full Cycle Program: MBA in Software Engineering with Artificial Intelligence | Years: 2026 – 2027 (in progress)

Program Summary: 12-month MEC-recognized program covering AI-native software architecture, LLM agent orchestration (MCP, A2A protocols), prompt engineering (CoT, ReAct, Tree of Thought), RAG/fine-tuning strategies, and DevOps/SRE with AI automation. Includes practical labs with real-world case studies, mentoring from industry leaders, and hands-on agent development.

Certifications

Rocketseat 2024 – React Native Fundamentals | 2024 – Interfaces, Navigation & Local Storage (React Native)

School of Net – JavaScript, React & Frontend 2021 – Node.js with GraphQL | 2020 – TypeScript in Practice | 2019 – Advanced React: Advanced Redux | 2019 – Advanced React: Beginning Redux (v3) | 2019 – React Native Basics (v1) | 2019 – React Native Basics (v2) | 2019 – React Native Basics (v3) | 2019 – APIs with Adonis.js | 2019 – AdonisJs MVC Framework | 2019 – Advanced AdonisJs | 2019 – Docker in Practice | 2019 – Getting Started with Docker (Update 1) | 2019 – Getting Started with Docker (Update 2) | 2019 – ES6: Modern JavaScript Concepts | 2018 – ES6 – New Concepts Introduced in JavaScript | 2018 – React.js: Getting Started | 2018 – Progressive Web Apps | 2018 – Vue.js 2 with Laravel | 2018 – Building RESTful APIs with Laravel | 2018 – Vue.js 2.0 (Update 2) | 2018 – Vue 2.0 with Vuex | 2018 – WebRTC – Real-Time Solutions

School of Net – PHP, Laravel, Symfony 2018 – Laravel 5.3: Scout & Real-Time Search | 2017 – Database & Eloquent ORM | 2017 – Laravel Mix | 2017 – Customizable Laravel GRIDs | 2017 – Laravel Passport | 2017 – Laravel Events & Queues | 2016 – Laravel 5.3 (Forms & Validations) | 2016 – Laravel Eloquent ORM | 2016 – Laravel Authentication | 2016 – Symfony 3 | 2016 – Symfony 3 with Doctrine

School of Net – Other 2020 – Slim Framework | 2020 – Slim Framework (RESTful API) | 2018 – Git and GitHub | 2017 – Introduction to Game Development

Udemy 2018 – Creating Applications with Ionic 3 & Laravel

TreinaWeb (Agile & Kanban) 2020 – Scrum: Agile Planning & Development | 2020 – Kanban: Fundamentals | 2020 – Kanban: Working with Scrum

Highlights

Identifies risks and blockers early | Asks clarifying questions that improve understanding | Provides visibility of progress and blockers | Approaches complex problems systematically — investigates root causes | Resolves issues efficiently focusing on delivery quality | Self-driven: writes documentation, builds tooling, and establishes standards without being asked | Mentored engineers joining the team and across teams | Comfortable working across time zones with US, European, and Brazilian teams | Strong track record collaborating with distributed LATAM and North American teams

Languages: Portuguese (Native), English (Professional working proficiency)
